

MYZA

Biofertilizer

Myza is a next generation HYT-based (high yield technology) arbuscular mycorrhizae fungus (AMF), symbiotically associated with plants, improves the supply of water and nutrients such as phosphates and nitrogen to the host plant.

Features:

- ➔ loaded with endomycorrhizal spores
- ➔ helps in essential plant nutrients availability to the plant in a bio-available form as a media

Available SKU: 4 kg

Benefits:

enhances water and nutrient uptake

profuse root development

crop growth and establishment

uniform quality and an increased yield of the crop

soil conservation and improves immunity

crops	dose
cotton, garlic, groundnut, horticultural crops, onion, paddy, potato, wheat	4-8 kg

Antidote: No specific antidote. Treat symptomatically.
