- ➔ has translaminar action to control insect

Available SKUs: 1 L, 500 ML, 250 ML, 100 ML

## Benefits:

excellent control

fit for resistance management tool

unique two-way action

translaminar action

cost-efficient solution

crop	target pests	dose/acre
chilli	borers, mites, thrips	300-400 ML

## Antidote:

Atropine, in addition to oxime preparations such as toxogonin under medical supervision. Inject 2 to 4 mg atropine sulphate (for children 0.5 to 2.0 mg according to age) i.v/ i.m every 5 to 10 minutes if signs of atropinisations occur. The patient must remain atropinised for a sufficient duration (24 to 48 hours) to prevent subsequent poisoning due to delayed resorption.
