

PARVAT

Pymetrozine 50% WG

Parvat is a systemic insecticide with translaminar action. It is recommended for effective control of brown planthopper in rice.

Features:

- ➔ after ingestion, paralyses hind legs of the hopper, restricting movement and damage to crop
- ➔ has a novel SPB (stylet puncture and blockage) activity
- ➔ prevents egg laying capacity of adults
- ➔ has systemic action and translocate within the plant very fast

Available SKUs: 1 kg, 500 g, 250 g, 120 g

Benefits:

effective control
of hoppers

3-way movement
acropetal, basipetal and
translaminar action in plant

hampers pest
population

safe for
beneficial insects

crop	target pest	dose/acre
rice	brown planthopper	120 g
