

PHOTIX

Bispyribac sodium 10% SC

Photix is a new generation broad-spectrum systemic post-emergence herbicide used to control grassy weeds such as *Echinochloa* spp, sedges and broadleaf weeds in paddy crop, both in nurseries and main fields.

Features:

- ➔ a broad-spectrum, post-emergence herbicide
- ➔ effectively controls grasses, sedges and broadleaf weeds infesting rice crops both in nurseries and main fields
- ➔ flexibility in application time: Photix offers a wide application window from 2-5 leaf stages of weeds and can be used in early post-emergence segments

Available SKUs: 1 L, 500 ML, 200 ML, 100 ML

Benefits:

broad-spectrum
control

wide application
window

safe for rice crop

crop	target weeds	dose/acre
rice (nursery)	<i>Alternanthera philoxeroides</i> , <i>Cyperus difformis</i> , <i>Cyperus iria</i> , <i>Echinochloa colonum</i> , <i>Echinochloa crusgalli</i> , <i>Eclipta alba</i> , <i>Fimbristylis miliacea</i> , <i>Ischaemum rugosum</i> , <i>Ludwigia parviflora</i> , <i>Monochoria vaginalis</i> , <i>Sphenoclea zeylanica</i>	80 ML
rice (transplanted and DSR)		100 ML

Antidote: No specific antidote. Treat symptomatically.
