

PLASTO

Metribuzin 70% WP

Plasto is a selective herbicide that effectively controls weeds in prescribed crops. Plasto is a pre-emergence herbicide and can also be applied as early post-emergence. It has broad-spectrum control of both grasses and broadleaf weeds.

Features:

- ➔ acts through the roots and leaves and therefore, can be used for both pre- and post-emergence applications
- ➔ economical because of its broad-spectrum activity and low dose
- ➔ no residual effect on succeeding crops

Available SKUs: 500 g, 250 g, 100 g

crops	target weeds	dose/acre
soybean	<i>Borreria spp.</i> , <i>Cyperus spp.</i> , <i>Digitaria spp.</i> , <i>Eragrostis spp.</i>	200-280 g
wheat	<i>Chenopodium album</i> , <i>Melilotus spp.</i> , <i>Phalaris minor</i>	100-120 g

Antidote: No specific antidote. Treat symptomatically.
