

# RYMIX

Metsulfuron methyl 10% + Chlorimuron ethyl 10% WP

Rymix is a pre- and post-emergence sulfonylurea herbicide that controls broadleaf weeds and sedges in rice.

## Features:

- ➔ has a contact and systemic action
- ➔ inhibits the biosynthesis of essential amino acids, that is, Valine and Isoleucine, thus stopping cells division and weeds growth
- ➔ can be applied as pre- as well as post-emergence herbicide
- ➔ has a good residual longevity in soil

Available SKUs: 8 g

## Benefits:

complete and effective control of weeds

quick arrest of weeds

provides flexibility in application

provides longer control

crop	target weeds	dose/acre
rice	Cyanotis axillaris, Cyperus spp., Eclipta alba, Fimbristylis miliacea, Ludwigia parviflora, Marsilea quadrifolia, Monochoria vaginalis	8 g

**Antidote:** No specific antidote. Treat symptomatically. Call the physician if needed.
